DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-32 are rejected under 35 U.S.C. 102(e) as being anticipated by Malone et al. (Malone), U.S. Patent Pub. No. 2005/0020299.

Regarding claims 1-32, Malone discloses a method for allocating channels from among a group of available channels, to one or more cells within a wireless LAN (WLAN), without causing unacceptable interference comprising: dividing a time period into frames, each frame having a substantially short duration; generating, for each frame, a set of active WLAN cells from the one or more cells based on an allocation vector; allocating, for each frame and to each one of the one or more active WLAN cells, one or more channels from among the group of available channels; permitting the active WLAN cells, during a given frame, to transmit; and preventing WLAN cells, that are not allocated a channel during a given frame, from transmitting during the given frame (pages 11-12 [0136] & [0149] and page 13 [0152] and page 14 [0172]).

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Vaisanen et al. US 2004/0192284, discloses an adaptive beacon interval in WLAN.
